7   </head>
8   <body>
9     <div class="main">
10      <h1>What is a Computer?</h1>
11      <br>
12      <p>Computers are devices that take input, process information, store data, and
produce output. They are used every day in phones, laptops, gaming systems, cars, and many
other technologies.</p>
13      <h3>Bohm-Jacopini</h3>
14      <p>Bohm-Jacopini talks about 2 computer scientists, Corrado Böhm and Giuseppe
Jacopini, who proved the <span class="bold">Structured Programming Theorem</span> in 1966.
15      In the theorem, they showed that any computer program can be written using only
three basic control structures:</body></p>
16      
17      
18      <ol>
19        <li><span class="bold">Sequence</span>-Carrying out instructions in order.
</li>
20        <li><span class="bold">Selection</span>-Making decisions using conditions such
as if else statements.</li>
21        <li><span class="bold">Repetition</span>-Repeating instructions with loops
until task is completed.</li>
22      </ol>
23      <p>The Structured Programming Theorem is important because it showed that complex
programs can be built from a few simple ideas.
24      Modern programming languages use these concepts to help developers create
reliable and organized software.</p>
25      <h3>3 Definitions of a Computer:</h3>
26      <ul>
27        <li>A programmable electronic device that can store, retrieve, and process
data.</li>
28        <li>A device that accepts data, performs processing operations on that data,
and supplies the results of these operations.</li>
29        <li>An electrical device operating under the control of instructions stored in
it own memory that can accept data, process it, produce information, and store it for future
use.</li>
30      </ul>
31      
32      <h3>Citations</h3>
33      <ul>
34        <li>Merriam-Webster Dictionary</li>
35        <li>NIST Glossary</li>
36        <li>TechTarget Information Technology Dictionary</li>
